

## Quiz #4 preparations

- Quiz 4: Wed, 5/4, 10AM, 26-100
  - 1 sheet with formulae etc
  - No books, calculators
- Evening review: Tue, 5/3, 7PM, 26-100
- Tutoring:
  - Angel Solis, Mon + Tue, 5/2, 5-7PM, Room 4-3XX

May 2 2005

web.mit.edu/8.02s/www

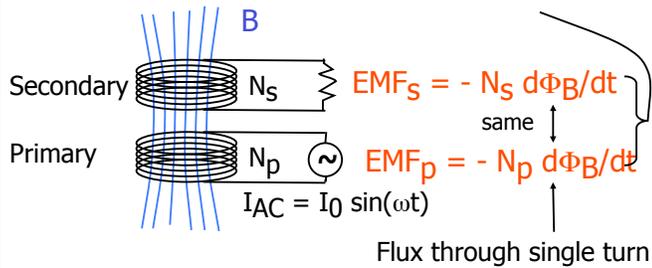

## Review for Quiz #4

May 2 2005

web.mit.edu/8.02s/www

## Transformer Action

- Transformer action  $EMF_S / EMF_P = N_S / N_P$

May 2 2005

web.mit.edu/8.02s/www

## Transformer Action

- Transformer action  $EMF_S / EMF_P = N_S / N_P$
- Transformers allow change of amplitude for AC voltage
  - ratio of secondary to primary windings
- Constructed such that  $\Phi_B$  identical for primary and secondary
- 

May 2 2005

web.mit.edu/8.02s/www

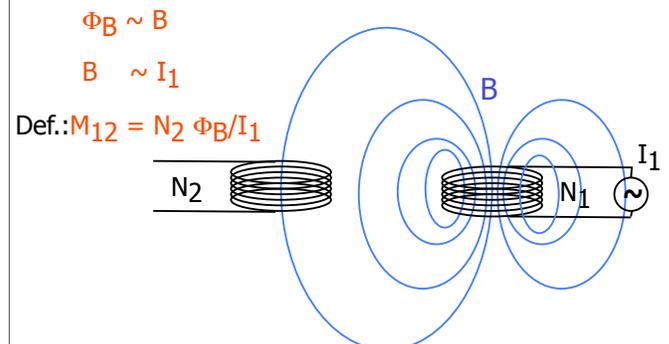

## What you need to know

- Transformers
  - Basic principle
  - Transformer in HVPS
  - Relationship between  $I, V, P$  on primary/secondary side
  - Demos
    - Jacobs Ladder
    - Melting nail

May 2 2005

web.mit.edu/8.02s/www

## Mutual Inductance

May 2 2005

web.mit.edu/8.02s/www

## Mutal Inductance

- Coupling is symmetric:  $M_{12} = M_{21} = M$
- $M$  depends only on Geometry and Material
- Mutual inductance gives strength of coupling between two coils (conductors):

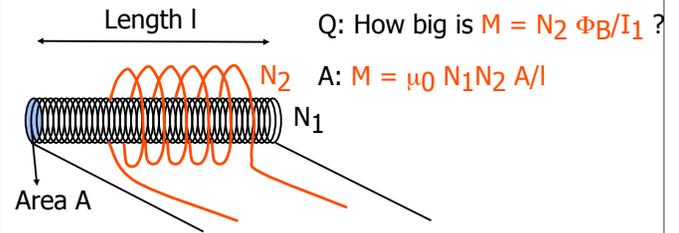

$$EMF_2 = - N_2 d\Phi_B/dt = - M dI_1/dt$$

- $M$  relates  $EMF_2$  and  $I_1$  (or  $EMF_1$  and  $I_2$ )
- Units:  $[M] = V/(A/s) = V s / A = H$  ('Henry')

May 2 2005

web.mit.edu/8.02s/www

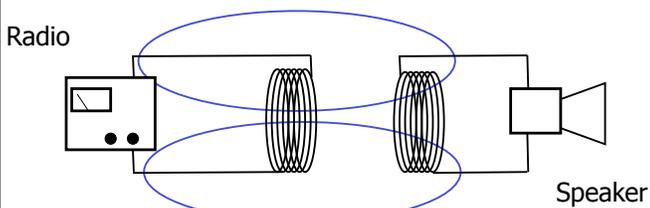

## Example: Two Solenoids

May 2 2005

web.mit.edu/8.02s/www

## Demo: Two Coils

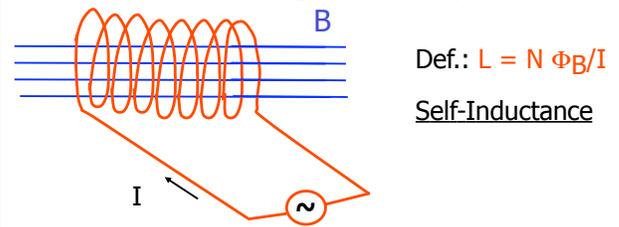

- Signal transmitted by varying B-Field
- Coupling depends on Geometry (angle, distance)

May 2 2005

web.mit.edu/8.02s/www

## Self Inductance

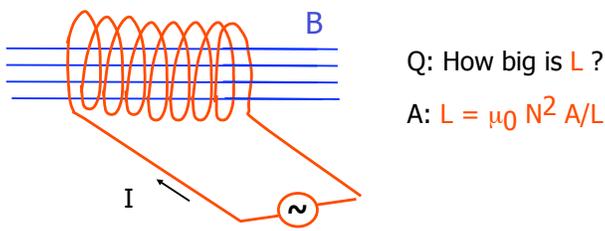

Circuit sees flux generated by it self

May 2 2005

web.mit.edu/8.02s/www

## Example: Solenoid

May 2 2005

web.mit.edu/8.02s/www

## Self Inductance

- $L$  is also measured in [H]
- $L$  connects induced EMF and variation in current:
 
$$EMF = - L dI/dt$$
- Remember Lenz' Rule:
 

Induced EMF will 'act against' change in current -> effective 'inertia'
- Delay between current and voltage

May 2 2005

web.mit.edu/8.02s/www

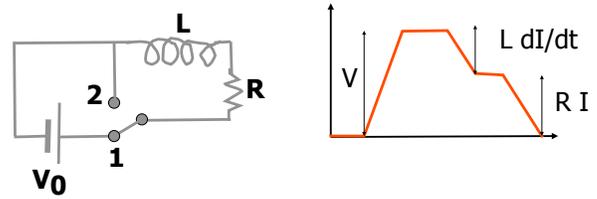

## What you need to know

- Inductance
  - Mutual Inductance
    - Definition
    - Calculation for simple geometry
  - Self Inductance
    - Definition
    - Calculation for simple geometry
    - Direction of induced EMF (depends only on  $dI/dt$ )

May 2 2005

web.mit.edu/8.02s/www

## RL Circuits

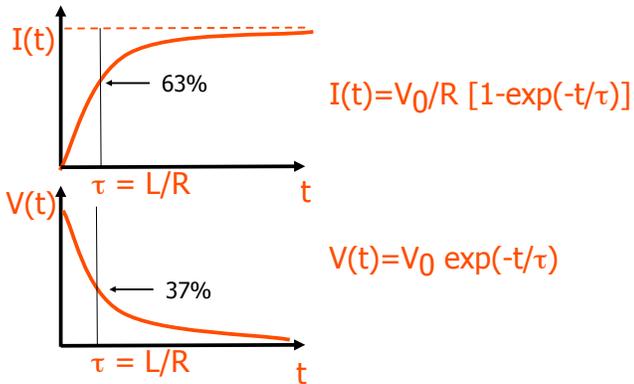

Kirchoffs Rule:  $V_0 + \xi_{ind} = R I \rightarrow V_0 = L dI/dt + R I$

Q: What is  $I(t)$ ?

May 2 2005

web.mit.edu/8.02s/www

## RL Circuits

May 2 2005

web.mit.edu/8.02s/www

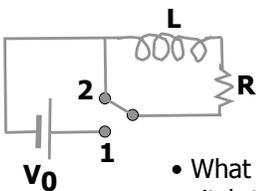

## RL Circuits

- Inductance leads to 'delay' in reaction of current to change of voltage  $V_0$
- All practical circuits have some  $L$  and  $R$  – change in  $I$  never instantaneous

May 2 2005

web.mit.edu/8.02s/www

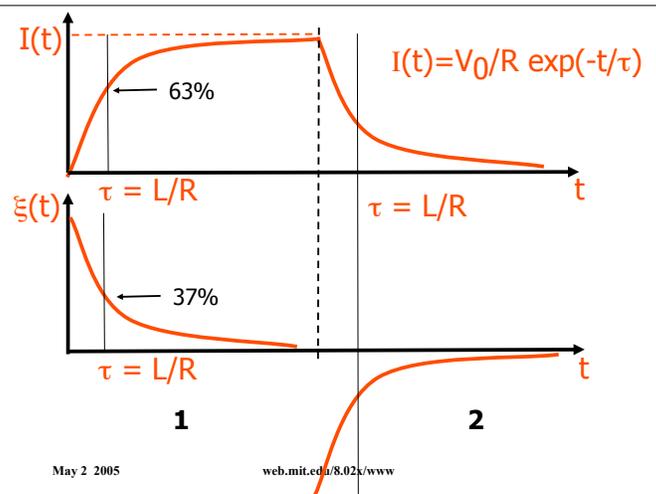

## 'Back EMF'

- What happens if we move switch to position 2?

May 2 2005

web.mit.edu/8.02s/www

May 2 2005

web.mit.edu/8.02s/www

## RL circuit

- L counteracts change in current both ways
  - Resists increase in I when connecting voltage source
  - Resists decrease in I when disconnecting voltage source
  - ‘Back EMF’
- That’s what causes spark when switching off e.g. appliance, light

May 2 2005

web.mit.edu/8.02s/www

## Energy Storage in Inductor

- Energy in Inductor
  - Start with Power  $P = V \cdot I = L \frac{dI}{dt} I = \frac{dU}{dt}$
  - >  $dU = L dI I$
  - >  $U = \frac{1}{2} L I^2$
- Where is the Energy stored?
  - Example: Solenoid (but true in general)

$$U/\text{Volume} = \frac{1}{2} B^2/\mu_0$$

May 2 2005

web.mit.edu/8.02s/www

## What you need to know

- Inductors
  - I(t) in DC RL circuits
  - Energy storage in inductors
  - Practical use

May 2 2005

web.mit.edu/8.02s/www

## RLC circuits

- Combine everything we know...
- Resonance Phenomena in RLC circuits
  - Resonance Phenomena known from mechanics (and engineering)
  - Great practical importance

May 2 2005

web.mit.edu/8.02s/www

## Summary of Circuit Components

 **V**  $V(t) = V_0 \cos(\omega t)$

 **R**  $V_R = -IR$

 **L**  $V_L = -L \frac{dI}{dt}$

 **C**  $V_C = -Q/C = -1/C \int I dt$

May 2 2005

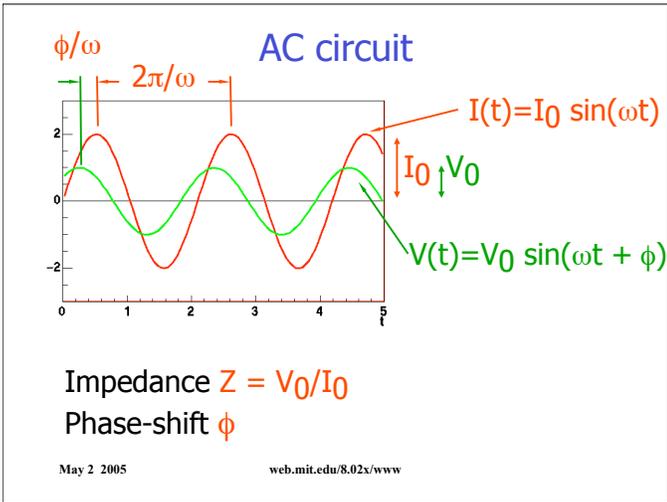

web.mit.edu/8.02s/www

## R,L,C in AC circuit

- AC circuit
    - $I(t) = I_0 \sin(\omega t)$
    - $V(t) = V_0 \sin(\omega t + \phi)$
- } same  $\omega!$
- Relationship between V and I can be characterized by two quantities
    - Impedance  $Z = V_0/I_0$
    - Phase-shift  $\phi$

May 2 2005

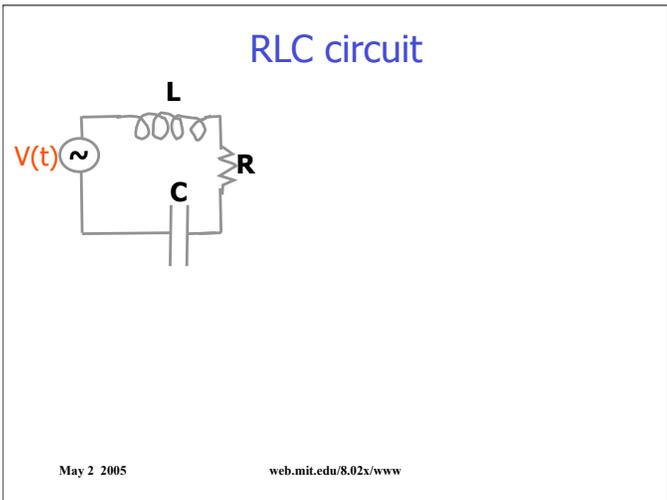

web.mit.edu/8.02s/www

### First: Look at the components

 $I(t)$	 $I(t)$	 $I(t)$
$V = IR$	$V = Q/C = 1/C \int Idt$	$V = L dI/dt$
$Z = R$	$Z = 1/(\omega C)$	$Z = \omega L$
$\phi = 0$	$\phi = -\pi/2$	$\phi = \pi/2$
V and I in phase	V lags I by $90^\circ$	I lags V by $90^\circ$

May 2 2005 web.mit.edu/8.02s/www

### RLC circuit

$V - L dI/dt - IR - Q/C = 0$   
 $L d^2Q/dt^2 = -1/C Q - R dQ/dt + V$   
 2<sup>nd</sup> order differential equation

May 2 2005 web.mit.edu/8.02s/www

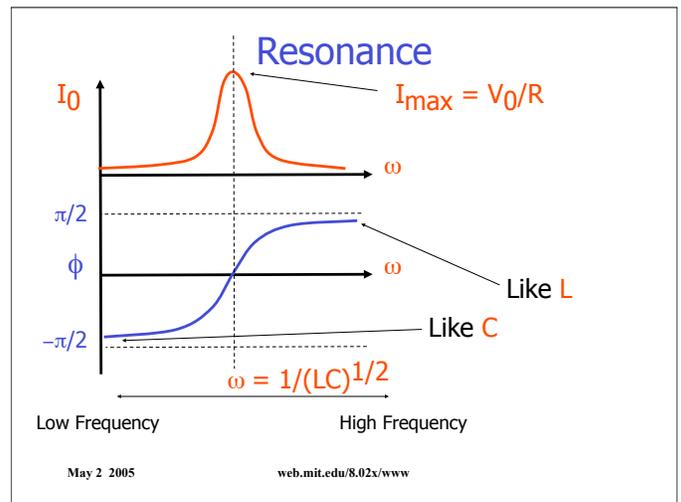

### RLC circuit

$V - L dI/dt - IR - Q/C = 0$   
 $L d^2Q/dt^2 = -1/C Q - R dQ/dt + V$

'Spring'  $\leftrightarrow$  'Inertia'  
 'Friction'  $\leftrightarrow$

$m d^2x/dt^2 = -kx - f dx/dt + F_{ext}$

May 2 2005 web.mit.edu/8.02s/www

## RLC circuit

$$V_0 \sin(\omega t) = I_0 \{ [\omega L - 1/(\omega C)] \cos(\omega t - \phi) + R \sin(\omega t - \phi) \}$$

Solution (requires two tricks):

$$I_0 = V_0 / ([\omega L - 1/(\omega C)]^2 + R^2)^{1/2} = V_0 / Z$$

$$\tan(\phi) = [\omega L - 1/(\omega C)] / R$$

-> For  $\omega L = 1/(\omega C)$ ,  $Z$  is minimal and  $\phi = 0$

i.e.  $\omega_0 = 1/(LC)^{1/2}$  Resonance Frequency

May 2 2005

web.mit.edu/8.02s/www

## Resonance

- Practical importance

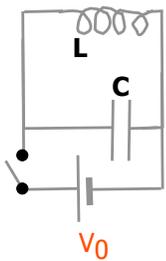

- 'Tuning' a radio or TV means adjusting the resonance frequency of a circuit to match the frequency of the carrier signal

May 2 2005

web.mit.edu/8.02s/www

## LC-Circuit

- What happens if we open switch?

$$-L \frac{dI}{dt} - Q/C = 0$$

$$L \frac{d^2Q}{dt^2} + Q/C = 0$$

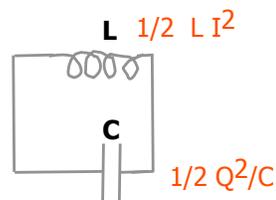

$$\frac{d^2x}{dt^2} + \omega_0^2 x = 0$$

Harmonic Oscillator!

May 2 2005

web.mit.edu/8.02s/www

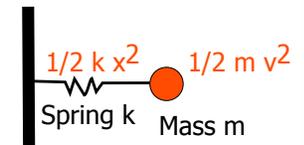

## LC-Circuit

Energy in E-Field

Energy in B-Field

Oscillation

Potential Energy

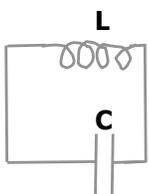

Kinetic Energy

Oscillation

May 2 2005

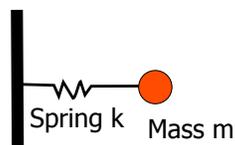

web.mit.edu/8.02s/www

## LC-Circuit

$$\frac{d^2Q}{dt^2} + 1/(LC) Q = 0$$

$$\omega_0^2 = 1/(LC)$$

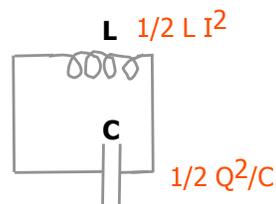

$$\frac{d^2x}{dt^2} + k/m x = 0$$

$$\omega_0^2 = k/m$$

May 2 2005

web.mit.edu/8.02s/www

## LC-Circuit

Energy in E-Field

Energy in B-Field

Oscillation

- Total energy  $U(t)$  is conserved:

$$Q(t) \sim \cos(\omega t)$$

$$dQ/dt \sim \sin(\omega t)$$

$$U_L \sim (dQ/dt)^2 \sim \sin^2$$

$$U_C \sim Q(t)^2 \sim \cos^2$$

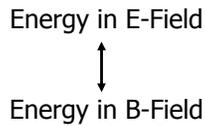

$$\cos^2(\omega t) + \sin^2(\omega t) = 1$$

May 2 2005

web.mit.edu/8.02s/www

## Electromagnetic Oscillations

- In an LC circuit, we see oscillations:

- Q: Can we get oscillations without circuit?
- A: Yes!  
 – **Electromagnetic Waves**

May 2 2005

web.mit.edu/8.02s/www

## What you need to know

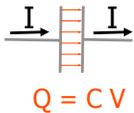

- RLC Circuits
  - How to obtain diff. equ (but not solve it)
  - Definition of impedance, phase shift
  - Phaseshift for C,R,L AC circuits
  - Impedance, phase shift at resonance
  - Limiting behavior of RLC circuit with frequency
  - LC, RLC analogy with mechanical systems
  - LC oscillations: Frequency, role of E,B energy

May 2 2005

web.mit.edu/8.02s/www

## Displacement Current

- Ampere's Law broken – How can we fix it?

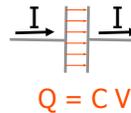

Displacement Current  $I_D = \epsilon_0 d\Phi_E/dt$

May 2 2005

web.mit.edu/8.02s/www

## Displacement Current

- Extension of Ampere's Law:

Displacement Current  $I_D = \epsilon_0 d\Phi_E/dt$

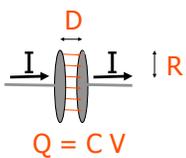

Changing field inside C also produces B-Field!

May 2 2005

web.mit.edu/8.02s/www

## Displacement Current

- Example calculation:  $B(r)$  for  $r > R$

$$\rightarrow B(r) = R^2/(2rc^2) dV/dt$$

May 2 2005

web.mit.edu/8.02s/www

## Maxwell's Equations

$$\oint_{A_{closed}} \vec{E} \cdot d\vec{A} = \frac{Q_{encl}}{\epsilon_0}$$

$$\oint_{L_{closed}} \vec{E} \cdot d\vec{l} = -\frac{d\Phi_B}{dt}$$

$$\oint_{A_{closed}} \vec{B} \cdot d\vec{A} = 0$$

$$\oint_{L_{closed}} \vec{B} \cdot d\vec{l} = \mu_0 I_{encl} + \mu_0 \epsilon_0 \frac{d\Phi_E}{dt}$$

- Symmetry between E and B
  - although there are no magnetic monopoles
- Basis for radio, TV, electric motors, generators, electric power transmission, electric circuits etc

May 2 2005

web.mit.edu/8.02s/www

## Maxwell's Equations

$$\oint_{A_{closed}} \vec{E} \cdot d\vec{A} = \frac{Q_{enc}}{\epsilon_0}$$

$$\oint_{L_{closed}} \vec{E} \cdot d\vec{l} = -\frac{d\Phi_B}{dt}$$

$$\oint_{A_{closed}} \vec{B} \cdot d\vec{A} = 0$$

$$\oint_{L_{closed}} \vec{B} \cdot d\vec{l} = \mu_0 I_{enc} + \mu_0 \epsilon_0 \frac{d\Phi_E}{dt}$$

- M.E.'s **predict** electromagnetic waves, moving with speed of light
- Major triumph of science

May 2 2005

web.mit.edu/8.02s/www

## What you need to know

- Displacement current
  - Definition
  - Calculation for simple geometry
  - It's not a current
- Maxwells equations
  - Meaning in words

May 2 2005

web.mit.edu/8.02s/www

## Reminder on waves

- Types of waves
  - Transverse
  - Longitudinal
    - compression/decompression

May 2 2005

web.mit.edu/8.02s/www

## Reminder on waves

- For a travelling wave (sound, water)
  - Q: What is actually moving?
  - -> **Energy!**
  - Speed of propagation:  $v = \lambda f$
  - Wave equation:

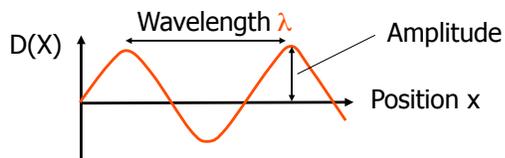

$$\frac{\partial^2 D(x, t)}{\partial x^2} = \frac{1}{v^2} \frac{\partial^2 D(x, t)}{\partial t^2} \quad \text{Couples variation in time and space}$$

May 2 2005

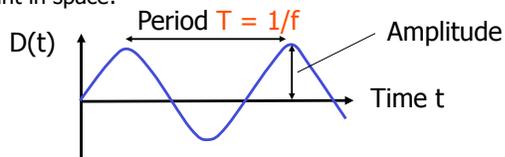

web.mit.edu/8.02s/www

## Reminder on waves

At a moment in time:

At a point in space:

May 2 2005

web.mit.edu/8.02s/www

## Wave Equation

- Wave equation:

$$\frac{\partial^2 D(x, t)}{\partial x^2} = \frac{1}{v^2} \frac{\partial^2 D(x, t)}{\partial t^2} \quad \text{Couples variation in time and space}$$

- Speed of propagation:  $v = \lambda f$
- We can derive a wave equation from Maxwells equations (**NOT IN QUIZ**)

May 2 2005

web.mit.edu/8.02s/www

## Plane waves

- Example solution: Plane waves

$$E_y = E_0 \cos(kz - \omega t)$$

$$B_x = B_0 \cos(kz - \omega t)$$

with  $k = \frac{2\pi}{\lambda}$ ,  $\omega = 2\pi f$  and  $f\lambda = c$ .

May 2 2005

web.mit.edu/8.02s/www

## E.M. Wave Summary

- $\vec{E} \perp \vec{B}$  and perpendicular to direction of propagation
- Transverse waves
- Speed of propagation  $v = c = \lambda f$
- $|\vec{E}|/|\vec{B}| = c$
- E.M. waves travel without medium

May 2 2005

web.mit.edu/8.02s/www

## What you need to know

- Waves
  - What is a wave?
  - Types of waves
  - Relationships between wavelength, frequency wave speed
- E.M. waves
  - Properties
  - Connection to demos (speed, polarisation)
  - Relative direction of E, B, v

May 2 2005

web.mit.edu/8.02s/www

## AMP Experiment

- Understand general idea/purpose
- Understand voltage dividers
- Understand need for negative feedback loop

May 2 2005

web.mit.edu/8.02s/www
