DISCLAIMER
We have made every effort to make sure that all parts fit together properly, but sometimes tolerances are tight and mistakes do happen. Test fit all pieces before applying glue. Some trimming may be required. Before photocopying or printing these pages on cardstock, you may wish to assemble a test copy on plain paper to better understand the construction. A minimum of 65# cover stock is recommended for constructing the final models. Regular 20 lb. bond paper can be used, but these items were designed for a heavier stock for extra durability and coloring.

Tools Required:
Scalpel or sharp-bladed hobby knife
Metal ruler or straight-edge
Cutting surface - a self-healing cutting mat is recommended, but a sheet of corrugated cardboard or even heavy poster board will work as well.
Glue - white glue, glue stick or wax stick. Double sided cellophane tape also works well. Rubber cement can be used, but will sometimes stain the cardstock or make it more difficult to color.

A Note About Using White Glue
White glue contains a good deal of water. Too much glue will warp the card stock so that its almost unusable. Warping may also cause the parts to fit together incorrectly. If you use white glue, put a very thin coat on the glue tabs - the thinner the better. You can use a cotton swab or your finger to spread the glue thin. Remember to keep a damp paper towel handy to remove any excess glue.

PLEASE NOTE:
Each item has been marked with a series of Grey Lines that are an indicator that these lines are Fold or Score lines. All Tabs which are to be glued to hold the structures together are marked with a capital letter (G). Unless otherwise noted, all Glue Tabs fold inwards to the structure.

TRAILER CONSTRUCTION
Cut out and score both sides of the body and the roof. Attach the back side of the trailer (the side with the cat in the window) to either the front or rear panel. To attach the roof, fold down all flaps and glue to the inside of the side walls, one side at a time, folding the roof to match the contour of the side walls. Fold the tabs along the top and side of the front and back walls and glue to the inside of the roof, forming a box. Set this section aside to dry.

To construct the front steps, fold in both sides and fold the top (with the stairs) down. Glue the tabs to the inside. Place the steps beneath the front door. To construct the ariel, fold into a triangular shape and glue one of the base flaps on top of the other. The ariel can be placed on the roof as desired. The storage boxes and air conditioners will all construct the same way, fold down the sides from the top and glue the tabs to the inside. The tabs along the bottom of all of these pieces are used for gluing to the surface of the trailer. The storage boxes can go on the roof while the air conditioners can go either in any of the windows or on the sides of the trailer as desired. To construct the trailer hitch, fold the front and back sides together to create a two sided piece, fold the two riveted panels out and glue to the blank rectangle in the front of the trailer.
